FDE#	FDE Name	Focal Document Element (FDE) Description	STRM Rationale	STRM Relationship	SCF Control	SCF#	Secure Controls Framework (SCF) Control Description	Strength of Relationship (optional)	Notes (optional)
03.01.01 A.03.01.01.ODP[01]	Account Management Account Management	Determine If: the time period for account inactivity before disabling is defined.	Functional Functional	no relationship	N/A Human Resources	N/A HRS-01	N/A Mechanisms exist to facilitate the implementation of personnel	N/A 10	No requirements to map to.
A.03.01.01.ODP[01]	Account Management	the time period for account inactivity before disabling is defined.	Functional	intersects with	Security Management Account Management	IAC-15	security controls. Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and temporary accounts.	5	
.03.01.01.ODP[02]	Account Management	the time period within which to notify account managers and designated personnel or roles when accounts are no longer required is defined.	Functional	subset of	Human Resources Security Management	HRS-01	Mechanisms exist to facilitate the implementation of personnel security controls.	10	
.03.01.01.ODP[03]	Account Management	the time period within which to notify account managers and designated personnel or roles when users are terminated or transferred is defined.	Functional	subset of	Human Resources Security Management	HRS-01	Mechanisms exist to facilitate the implementation of personnel security controls.	10	
.03.01.01.ODP[04]	Account Management	the time period within which to notify account managers and designated personnel or roles when system usage or the need-to-know changes for an individual is defined.	Functional	subset of	Human Resources Security Management	HRS-01	Mechanisms exist to facilitate the implementation of personnel security controls.	10	
.03.01.01.ODP[05]	Account Management	the time period of expected inactivity requiring users to log out of the system is defined.	Functional	intersects with	Session Termination	IAC-25	Automated mechanisms exist to log out users, both locally on the network and for remote sessions, at the end of the session or after an organization-defined period of inactivity.	5	
03.01.01.ODP[06]	Account Management	circumstances requiring users to log out of the system are defined.	Functional	intersects with	Session Termination	IAC-25	Automated mechanisms exist to log out users, both locally on the network and for remote sessions, at the end of the session or after an organization-defined period of inactivity.	5	
A.03.01.01.a[01]	Account Management	system account types allowed are defined. system account types allowed are defined.	Functional	intersects with	Account Management	IAC-15	Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and temporary accounts. Mechanisms exist to review all system accounts and disable	5	
A.03.01.01.a[01]	Account Management	system account types attowed are defined. system account types prohibited are defined.	Functional	intersects with	System Account Reviews	IAC-15.7	any account that cannot be associated with a business process and owner. Mechanisms exist to proactively govern account management	5	
A.03.01.01.a[02]	Account Management	system account types prohibited are defined.	Functional	intersects with	Account Management	IAC-15	of individual, group, system, service, application, guest and temporary accounts. Mechanisms exist to review all system accounts and disable	5	
A.03.01.01.a[02]	Account Management	system accounts are created in accordance with organizational	Functional	intersects with	System Account Reviews	IAC-15.7	any account that cannot be associated with a business process and owner. Mechanisms exist to utilize a formal user registration and de-	5	
A.03.01.01.b[01]	Account Management	policy, procedures, prerequisites, and criteria. system accounts are created in accordance with organizational	Functional	intersects with	User Provisioning & De- Provisioning	IAC-07	registration process that governs the assignment of access rights. Mechanisms exist to review all system accounts and disable	5	
A.03.01.01.b[01]	Account Management	policy, procedures, prerequisites, and criteria. system accounts are enabled in accordance with organizational	Functional	intersects with	System Account Reviews User Provisioning & De-	IAC-15.7	any account that cannot be associated with a business process and owner. Mechanisms exist to utilize a formal user registration and de-	5	
A.03.01.01.b[02]	Account Management	policy, procedures, prerequisites, and criteria. system accounts are enabled in accordance with organizational	Functional	intersects with	Provisioning System Account	IAC-07	registration process that governs the assignment of access rights. Mechanisms exist to review all system accounts and disable	5	
A.03.01.01.b[02]	Account Management	policy, procedures, prerequisites, and criteria. system accounts are modified in accordance with	Functional	intersects with	Reviews User Provisioning & De-	IAC-15.7	any account that cannot be associated with a business process and owner. A.03.01.01.b[03]	Account Management	organizational policy, procedures, prerequisites, and criteria. system accounts are modified in accordance with	Functional	intersects with	Provisioning System Account	IAC-07	registration process that governs the assignment of access rights. Mechanisms exist to review all system accounts and disable	5	
A.03.01.01.b[03]	Account Management	organizational policy, procedures, prerequisites, and criteria. system accounts are disabled in accordance with	Functional	intersects with	Reviews User Provisioning & De-	IAC-15.7	any account that cannot be associated with a business process and owner. Mechanisms exist to utilize a formal user registration and de-	5	
A.03.01.01.b[04]	Account Management	organizational policy, procedures, prerequisites, and criteria. system accounts are disabled in accordance with	Functional	intersects with	Provisioning System Account	IAC-07	registration process that governs the assignment of access rights. Mechanisms exist to review all system accounts and disable	5	
A.03.01.01.b[04] A.03.01.01.b[05]	Account Management Account Management	organizational policy, procedures, prerequisites, and criteria. system accounts are removed in accordance with organizational policy, procedures, prerequisites, and criteria.	Functional	intersects with	Reviews User Provisioning & De-	IAC-07	any account that cannot be associated with a business process and owner. Mechanisms exist to utilize a formal user registration and de- registration process that governs the assignment of access	5	
A.03.01.01.b[05]	Account Management	system accounts are removed in accordance with organizational policy, procedures, prerequisites, and criteria.	Functional	intersects with	Provisioning System Account	IAC-15.7	rights. Mechanisms exist to review all system accounts and disable any account that cannot be associated with a business process	5	
A.03.01.01.c.01	Account Management	authorized users of the system are specified.	Functional	intersects with	Reviews Account Management	IAC-15	and owner. Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and	5	
A.03.01.01.c.01	Account Management	authorized users of the system are specified.	Functional	intersects with	System Account Reviews	IAC-15.7	temporary accounts. Mechanisms exist to review all system accounts and disable any account that cannot be associated with a business process	5	
A.03.01.01.c.02	Account Management	group and role memberships are specified.	Functional	intersects with	Role-Based Access Control (RBAC)	IAC-08	and owner. Mechanisms exist to enforce a Role-Based Access Control (RBAC) policy over users and resources that applies need-to- know and fine-grained access control for sensitive/regulated	5	
A.03.01.01.c.03	Account Management	access authorizations (i.e., privileges) for each account are specified.	Functional	intersects with	Role-Based Access Control (RBAC)	IAC-08	data access. Mechanisms exist to enforce a Role-Based Access Control (RBAC) policy over users and resources that applies need-to- know and fine-grained access control for sensitive/regulated	5	
A.03.01.01.d.01	Account Management	access to the system is authorized based on a valid access authorization.	Functional	intersects with	Authenticate, Authorize and Audit (AAA)	IAC-01.2	data access. Mechanisms exist to strictly govern the use of Authenticate, Authorize and Audit (AAA) solutions, both on-premises and	5	
A.03.01.01.d.02	Account Management	access to the system is authorized based on intended system usage.	Functional	intersects with	Authenticate, Authorize and Audit (AAA)	IAC-01.2	those hosted by an External Service Provider (ESP). Mechanisms exist to strictly govern the use of Authenticate, Authorize and Audit (AAA) solutions, both on-premises and those hosted by an External Service Provider (ESP).	5	
A.03.01.01.e	Account Management	the use of system accounts is monitored.	Functional	intersects with	Account Management	IAC-15	Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and	5	
A.03.01.01.f.01	Account Management	system accounts are disabled when the accounts have expired.	Functional	intersects with	Account Management	IAC-15	temporary accounts. Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and	5	
A.03.01.01.f.02	Account Management	system accounts are disabled when the accounts have been inactive for <a.03.01.01.odp[01]: period="" time="">.</a.03.01.01.odp[01]:>	Functional	intersects with	Account Management	IAC-15	temporary accounts. Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and temporary accounts.	8	US DoD ODP Value: at most 90 days
A.03.01.01.f.02	Account Management	system accounts are disabled when the accounts have been inactive for <a.03.01.01.odp[01]: period="" time="">.</a.03.01.01.odp[01]:>	Functional	intersects with	Disable Inactive Accounts	IAC-15.3	Automated mechanisms exist to disable inactive accounts after an organization-defined time period.	8	US DoD ODP Value: at most 90 days
A.03.01.01.f.03	Account Management	system accounts are disabled when the accounts are no longer associated with a user or individual.	Functional	intersects with	Account Management	IAC-15	Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and temporary accounts.	5	
A.03.01.01.f.04	Account Management	system accounts are disabled when the accounts violate organizational policy.	Functional	intersects with	Account Management	IAC-15	Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and temporary accounts.	5	
A.03.01.01.f.05	Account Management	system accounts are disabled when significant risks associated with individuals are discovered.	Functional	intersects with	Account Management	IAC-15	Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and temporary accounts.	5	
A.03.01.01.g.01	Account Management	account managers and designated personnel or roles are notified within < A.03.01.01.ODP[02]: time period> when accounts are no longer required.	Functional	intersects with	Account Management	IAC-15	Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and temporary accounts.	8	US DoD ODP Value: 24 hours
A.03.01.01.g.02	Account Management	account managers and designated personnel or roles are notified within <a.03.01.01.0dp[03]: period="" time=""> when users are terminated or transferred.</a.03.01.01.0dp[03]:>	Functional	intersects with	Account Management	IAC-15	Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and temporary accounts.	8	US DoD ODP Value: 24 hours

Secure Controls Framework (SCF) 1 of 26

FDE#	FDE Name	Focal Document Element (FDE) Description	STRM Rationale	STRM Relationship	SCF Control	SCF#	Secure Controls Framework (SCF) Control Description	Strength of Relationship (optional)	Notes (optional)
A.03.01.01.g.03	Account Management	account managers and designated personnel or roles are notified within < A.03.01.01.ODP[04]: time period> when system usage or the need-to-know changes for an individual.	Functional	intersects with	Account Management	IAC-15	Mechanisms exist to proactively govern account management of individual, group, system, service, application, guest and temporary accounts.	8	US DoD ODP Value: 24 hours
A.03.01.01.h	Account Management	users are required to log out of the system after <a.03.01.01.odp[05]: period="" time=""> of expected inactivity or when the following circumstances occur: <a.03.01.01.odp[06]: circumstances>.</a.03.01.01.odp[06]: </a.03.01.01.odp[05]:>	Functional	intersects with	Session Termination	IAC-25	Automated mechanisms exist to log out users, both locally on the network and for remote sessions, at the end of the session or after an organization-defined period of inactivity.	8	US DoD ODP Values: [05] - at most 24 hours [06] - the work period ends, for privileged users at a minimum
03.01.02	Access Enforcement	Determine If: approved authorizations for logical access to CUI are enforced	Functional	no relationship	N/A Sensitive / Regulated	N/A	N/A	N/A	No requirements to map to.
A.03.01.02[01]	Access Enforcement	in accordance with applicable access control policies.	Functional	intersects with	Data Access Enforcement	CFG-08	Mechanisms exist to configure systems, applications and processes to restrict access to sensitive/regulated data.	5	
A.03.01.02[02]	Access Enforcement	approved authorizations for logical access to system resources are enforced in accordance with applicable access control policies.	Functional	intersects with	Least Privilege	IAC-21	Mechanisms exist to utilize the concept of least privilege, allowing only authorized access to processes necessary to accomplish assigned tasks in accordance with organizational business functions.	5	
03.01.03	Information Flow Enforcement	Determine If:	Functional	no relationship	N/A	N/A	N/A	N/A	No requirements to map to.
	Information Flow	approved authorizations are enforced for controlling the flow of			System Hardening		Mechanisms exist to develop, document and maintain secure baseline configurations for technology platforms that are		
A.03.01.03[01]	Enforcement Information Flow	CUI within the system. approved authorizations are enforced for controlling the flow of	Functional	intersects with	Through Baseline Configurations	CFG-02	consistent with industry-accepted system hardening standards. Mechanisms exist to facilitate the implementation of endpoint	5	
A.03.01.03[01]	Enforcement	CUI within the system. approved authorizations are enforced for controlling the flow of	Functional	subset of	Endpoint Security Data Flow Enforcement	END-01	security controls. Mechanisms exist to design, implement and review firewall and	10	
A.03.01.03[02]	Information Flow Enforcement	CUI between connected systems.	Functional	intersects with	- Access Control Lists (ACLs)	NET-04	router configurations to restrict connections between untrusted networks and internal systems.	5	
A.03.01.03[02]	Information Flow Enforcement	approved authorizations are enforced for controlling the flow of CUI between connected systems.	Functional	intersects with	System Interconnections	NET-05	Mechanisms exist to authorize connections from systems to other systems using Interconnection from systems to other systems using Interconnection Security Agreements (ISAs), or similar methods, that document, for each interconnection, the interface characteristics, cybersecurity & data privacy requirements and the nature of the information communicated.	5	
03.01.04	Separation of Duties	Determine If: duties of individuals requiring separation are identified.	Functional	no relationship	N/A	N/A	N/A Mechanisms exist to implement and maintain Separation of	N/A	No requirements to map to.
A.03.01.04.a	Separation of Duties		Functional	intersects with	Separation of Duties (SoD)	HRS-11	Duties (SoD) to prevent potential inappropriate activity without collusion.	5	
03.01.05	Least Privilege	Determine If: security functions for authorized access are defined.	Functional	no relationship	N/A	N/A	N/A Mechanisms exist to enforce a Role-Based Access Control	N/A	No requirements to map to.
A.03.01.05.ODP[01]	Least Privilege		Functional	intersects with	Role-Based Access Control (RBAC)	IAC-08	(RBAC) policy over users and resources that applies need-to- know and fine-grained access control for sensitive/regulated data access.	5	
A.03.01.05.ODP[02]	Least Privilege	security-relevant information for authorized access is defined.	Functional	intersects with	Role-Based Access Control (RBAC)	IAC-08	Mechanisms exist to enforce a Role-Based Access Control (RBAC) policy over users and resources that applies need-to- know and fine-grained access control for sensitive/regulated data access.	5	
A.03.01.05.ODP[03]	Least Privilege	the frequency at which to review the privileges assigned to roles or classes of users is defined.	Functional	intersects with	Periodic Review of Account Privileges	IAC-17	Mechanisms exist to periodically-review the privileges assigned to individuals and service accounts to validate the need for such privileges and reassign or remove unnecessary privileges, as necessary.	5	
A.03.01.05.a	Least Privilege	system access for users (or processes acting on behalf of users) is authorized only when necessary to accomplish assigned organizational tasks.	Functional	intersects with	Least Privilege	IAC-21	Mechanisms exist to utilize the concept of least privilege, allowing only authorized access to processes necessary to accomplish assigned tasks in accordance with organizational business functions.	5	
A.03.01.05.b[01]	Least Privilege	access to <<.03.01.05.ODP[01]: security functions> is authorized.	Functional	intersects with	Rote-Based Access Control (RBAC)	IAC-08	Mechanisms exist to enforce a Role-Based Access Control (RBAC) policy over users and resources that applies need-to-know and fine-grained access control for sensitive/regulated data access.	8	US DOD ODP Value: at a minimum and if applicable: establishing system accounts and assigning privileges, configuring access authorizations, configuring actings for events to be audited, establishing furnishing valuerability scanning parameters, establishing intrusion detection parameters, and managing audit information
A.03.01.05.b[01]	Least Privilege	access to < \$.03.01.05.ODP[01]: security functions> is authorized.	Functional	intersects with	Access To Sensitive / Regulated Data	IAC-20.1	Mechanisms exist to limit access to sensitive/regulated data to only those individuals whose job requires such access.	8	US DOD OOP Value: at a minimum and if applicable: establishing system accounts and assigning privileges, configuring access authorizations, configuring estings for events to be audited, establishing wulnerability scanning parameters, establishing intrusion detection parameters, and managing audit information
A.03.01.05.b[02]	Least Privilege	access to < A.03.01.05.ODP[02]: security-relevant information> is authorized.	Functional	intersects with	Role-Based Access Control (RBAC)	IAC-08	Mechanisms exist to enforce a Role-Based Access Control (RBAC) policy over users and resources that applies need-to-know and fine-grained access control for sensitive/regulated data access.	8	US DOD ODP Value: at a minimum and if applicable: threat and vulnerability information, filtering rules for routers or firewalts, configuration parameters for security services, cryptographic key management information, security architecture, access control lists, and audit information information.
A.03.01.05.b[02]	Least Privilege	access to < \$.03.01.05.ODP[02]: security-relevant information> is authorized.	Functional	intersects with	Access To Sensitive / Regulated Data	IAC-20.1	Mechanisms exist to limit access to sensitive/regulated data to only those individuals whose job requires such access.	8	US DOD ODP Value: at a minimum and if applicable: threat and vulnerability information, filtering rules for routers or firewalls, configuration parameters for security services, cryptographic key management information, security architecture, access control lists, and audit
A.03.01.05.c	Least Privilege	the privileges assigned to roles or classes of users are reviewed <<.03.01.05.ODP[03]: frequency> to validate the need for such privileges.	Functional	intersects with	Periodic Review of Account Privileges	IAC-17	Mechanisms exist to periodically-review the privileges assigned to individuals and service accounts to validate the need for such privileges and reassign or remove unnecessary privileges, as necessary.	8	information US DoD ODP Value: at least every 12 months
A.03.01.05.d	Least Privilege	privileges are reassigned or removed, as necessary.	Functional	intersects with	Periodic Review of Account Privileges	IAC-17	Mechanisms exist to periodically-review the privileges assigned to individuals and service accounts to validate the need for such privileges and reassign or remove unnecessary privileges, as necessary.	5	
03.01.06	Least Privilege – Privileged Accounts	Determine If:	Functional	no relationship	N/A	N/A	N/A	N/A	No requirements to map to.
A.03.01.06.ODP[01]	Least Privilege – Privileged Accounts	personnel or roles to which privileged accounts on the system are to be restricted are defined.	Functional	intersects with	Privileged Accounts	IAC-21.3	Mechanisms exist to restrict the assignment of privileged accounts to organization-defined personnel or roles without management approval.	5	
A.03.01.06.a	Least Privilege – Privileged Accounts	privileged accounts on the system are restricted to <a.03.01.06.odp[01]: or="" personnel="" roles="">.</a.03.01.06.odp[01]:>	Functional	intersects with	Privileged Accounts	IAC-21.3	Mechanisms exist to restrict the assignment of privileged accounts to organization-defined personnel or roles without management approval.	8	US DoD ODP Value: only defined and authorized personnel or administrative roles
A.03.01.06.b	Least Privilege – Privileged Accounts	users (or roles) with privileged accounts are required to use non- privileged accounts when accessing non-security functions or non-security information.	Functional	intersects with	Non-Privileged Access for Non-Security Functions	IAC-21.2	Mechanisms exist to prohibit privileged users from using privileged accounts, while performing non-security functions.	5	
03.01.07	Least Privilege – Privileged Functions	Determine If:	Functional	no relationship	N/A	N/A	N/A	N/A	No requirements to map to.
A.03.01.07.a	Least Privilege – Privileged Functions	non-privileged users are prevented from executing privileged functions.	Functional	intersects with	Prohibit Non-Privileged Users from Executing Privileged Functions	IAC-21.5	Mechanisms exist to prevent non-privileged users from executing privileged functions to include disabling, circumventing or altering implemented security safeguards /	5	
A.03.01.07.b	Least Privilege –	the execution of privileged functions is logged.	Functional	intersects with	Privileged Functions	MON-03.3	countermeasures. Mechanisms exist to log and review the actions of users and/or	5	
03.01.08	Privileged Functions Unsuccessful Logon Attempts	Determine If:	Functional	no relationship	Logging N/A	N/A	services with elevated privileges. N/A	N/A	No requirements to map to.

A.03.10.07.c[01]	Physical Access Control	visitors are escorted.	Functional	intersects with	Distinguish Visitors from On-Site Personnel	PES-06.1	Physical access control mechanisms exist to easily distinguish between onsite personnel and visitors, especially in areas where sensitive/regulated data is accessible.	5	
A.03.10.07.c[01]	Physical Access Control	visitors are escorted.	Functional	intersects with	Restrict Unescorted Access	PES-06.3	Physical access control mechanisms exist to restrict unescorted access to facilities to personnel with required security clearances, formal access authorizations and validate	5	
A.03.10.07.c[02]	Physical Access Control	visitor activity is controlled.	Functional	intersects with	Visitor Control	PES-06	the need for access. Physical access control mechanisms exist to identify, authorize and monitor visitors before allowing access to the facility (other than areas designated as publicly accessible).	5	
A.03.10.07.c[02]	Physical Access Control	visitor activity is controlled.	Functional	intersects with	Distinguish Visitors from On-Site Personnel	PES-06.1	Physical access control mechanisms exist to easily distinguish between onsite personnel and visitors, especially in areas where sensitive/regulated data is accessible.	5	
A.03.10.07.c[02]	Physical Access Control	visitor activity is controlled.	Functional	intersects with	Restrict Unescorted Access	PES-06.3	Physical access control mechanisms exist to restrict unescorted access to facilities to personnel with required security clearances, formal access authorizations and validate	5	
A.03.10.07.d	Physical Access Control	keys, combinations, and other physical access devices are secured.	Functional	intersects with	Physical Access Control	PES-03	the need for access. Physical access control mechanisms exist to enforce physical access authorizations for all physical access points (including designated entry/exit points) to facilities (excluding those areas within the facility officialty designated as publicly accessible).	5	
A.03.10.07.e	Physical Access Control	physical access to output devices is controlled to prevent unauthorized individuals from obtaining access to CUI.	Functional	intersects with	Access Control for Output Devices	PES-12.2	Physical security mechanisms exist to restrict access to printers and other system output devices to prevent unauthorized individuals from obtaining the output.	5	
03.10.08	Access Control for Transmission	Determine If:	Functional	no relationship	N/A	N/A	N/A	N/A	No requirements to map to.
A.03.10.08	Access Control for Transmission	physical access to system distribution and transmission lines within organizational facilities is controlled.	Functional	intersects with	Transmission Medium Security	PES-12.1	Physical security mechanisms exist to protect power and telecommunications cabling carrying data or supporting information services from interception, interference or damage.	5	
03.11.01	Risk Assessment	Determine If: the frequency at which to update the risk assessment is	Functional	no relationship	N/A	N/A	N/A Mechanisms exist to routinely update risk assessments and	N/A	No requirements to map to.
A.03.11.01.ODP[01]	Risk Assessment	defined.	Functional	intersects with	Risk Assessment Update	RSK-07	react accordingly upon identifying new security vulnerabilities, including using outside sources for security vulnerability information.	5	
A.03.11.01.a	Risk Assessment	the risk (including supply chain risk) of unauthorized disclosure resulting from the processing, storage, or transmission of CUI is assessed.	Functional	intersects with	Risk Framing	RSK-01.1	Mechanisms exist to identify: (1) Assumptions affecting risk assessments, risk response and risk monitoring; (2) Constraints affecting risk assessments, risk response and risk monitoring; (3) The organizational risk tolerance; and (4) Priorities, benefits and trade-offs considered by the organization for managing risk.	5	
A.03.11.01.a	Risk Assessment	the risk (including supply chain risk) of unauthorized disclosure resulting from the processing, storage, or transmission of CUI is	Functional	intersects with	Risk Identification	RSK-03	Mechanisms exist to identify and document risks, both internal and external.	5	
A.03.11.01.a	Risk Assessment	assessed. the risk (including supply chain risk) of unauthorized disclosure resulting from the processing, storage, or transmission of CUI is assessed.	Functional	intersects with	Risk Catalog	RSK-03.1	Mechanisms exist to develop and keep current a catalog of applicable risks associated with the organization's business operations and technologies in use.	5	
A.03.11.01.a	Risk Assessment	the risk (including supply chain risk) of unauthorized disclosure resulting from the processing, storage, or transmission of CUI is assessed.	Functional	intersects with	Risk Assessment	RSK-04	Mechanisms exist to conduct recurring assessments of risk that includes the likelihood and magnitude of harm, from unauthorized access, use, disclosure, disruption, modification or destruction of the organization's systems and data.	5	
A.03.11.01.a	Risk Assessment	the risk (including supply chain risk) of unauthorized disclosure resulting from the processing, storage, or transmission of CUI is assessed.	Functional	subset of	Supply Chain Risk Management (SCRM) Plan	RSK-09	Mechanisms exist to develop a plan for Supply Chain Risk Management (SCRM) associated with the development, acquisition, maintenance and disposal of systems, system components and services, including documenting selected mitigating actions and monitoring performance against those plans.	10	
A.03.11.01.b	Risk Assessment	risk assessments are updated < A.03.11.01.0DP[01]: frequency>.	Functional	intersects with	Risk Assessment	RSK-04	Mechanisms exist to conduct recurring assessments of risk that includes the likelihood and magnitude of harm, from unauthorized access, use, disclosure, disruption, modification or destruction of the organization's systems and data.	8	US DoD ODP Value: at least every 12 months, or when there are significant incidents or significant changes to risks
A.03.11.01.b	Risk Assessment	risk assessments are updated <a.03.11.01.odp[01]: frequency>.</a.03.11.01.odp[01]: 	Functional	intersects with	Risk Assessment Update	RSK-07	Mechanisms exist to routinely update risk assessments and react accordingly upon identifying new security vulnerabilities, including using outside sources for security vulnerability information.	8	US DoD ODP Value: at least every 12 months, or when there are significant incidents or significant changes to risks
03.11.02	Vulnerability Monitoring and Scanning	Determine If:	Functional	no relationship	N/A	N/A	N/A	N/A	No requirements to map to.
A.03.11.02.ODP[01]	Vulnerability Monitoring and Scanning	the frequency at which the system is monitored for vulnerabilities is defined.	Functional	intersects with	Vulnerability Scanning	VPM-06	Mechanisms exist to detect vulnerabilities and configuration errors by routine vulnerability scanning of systems and applications.	5	
A.03.11.02.ODP[02]	Vulnerability Monitoring and Scanning	the frequency at which the system is scanned for vulnerabilities is defined. response times to remediate system vulnerabilities are defined.	Functional	intersects with	Vulnerability Scanning Vulnerability & Patch	VPM-06	Mechanisms exist to detect vulnerabilities and configuration errors by routine vulnerability scanning of systems and applications.	5	
A.03.11.02.ODP[03]	Vulnerability Monitoring and Scanning		Functional	subset of	Management Program (VPMP)	VPM-01	Mechanisms exist to facilitate the implementation and monitoring of vulnerability management controls.	10	
A.03.11.02.ODP[03]	Vulnerability Monitoring and Scanning	response times to remediate system vulnerabilities are defined.	Functional	intersects with	Vulnerability Remediation Process	VPM-02	Mechanisms exist to ensure that vulnerabilities are properly identified, tracked and remediated.	5	
A.03.11.02.ODP[04]	Vulnerability Monitoring and Scanning Vulnerability Monitoring	the frequency at which to update system vulnerabilities to be scanned is defined. the frequency at which to update system vulnerabilities to be	Functional	intersects with	Vulnerability Scanning	VPM-06	Mechanisms exist to detect vulnerabilities and configuration errors by routine vulnerability scanning of systems and applications.	5	
A.03.11.02.ODP[04]	and Scanning Vulnerability Monitoring	scanned is defined. the system is monitored for vulnerabilities < A.03.11.02.ODP[01]:	Functional	intersects with		VPM-06.1	Mechanisms exist to update vulnerability scanning tools. A.03.15.02.a.07	System Security Plan	a system security plan that identifies individuals that fulfill system roles and responsibilities is developed.	Functional	subset of	System Security & Privacy Plan (SSPP)	IAO-03	Mechanisms exist to generate System Security & Privacy Plans (SSPPs), or similar document repositories, to identify and maintain key architectural information on each critical system, application or service, as well as influence inputs, entities, systems, applications and processes, providing a historical record of the data and its origins.	10	
A.03.15.02.a.08	System Security Plan	a system security plan that includes other relevant information necessary for the protection of CUI is developed.	Functional	subset of	System Security & Privacy Plan (SSPP)	IAO-03	Mechanisms exist to generate System Security & Privacy Plans (SSPPs), or similar document repositories, to identify and maintain key architectural information on each critical system, application or service, as well as influence inputs, entities, systems, applications and processes, providing a historical record of the data and its origins.	10	
A.03.15.02.b[01]	System Security Plan	the system security plan is reviewed < A.03.15.02.ODP[01]: frequency>.	Functional	subset of	System Security & Privacy Plan (SSPP)	IAO-03	Mechanisms exist to generate System Security & Privacy Plans (SSPPs), or similar document repositories, to identify and maintain key architectural information on each critical system, application or service, as well as influence inputs, entities, systems, applications and processes, providing a historical record of the data and its origins.	10	US DOD ODP Value: at least every 12 months, or when there are significant incidents or significant changes to risks
A.03.15.02.b[02]	System Security Plan	the system security plan is updated < A.03.15.02.ODP[01]: frequency>.	Functional	subset of	System Security & Privacy Plan (SSPP)	IAO-03	Mechanisms exist to generate System Security & Privacy Plans (SSPPs), or similar document repositories, to identify and maintain key architectural information on each critical system, application or service, as well as influence inputs, entities, systems, applications and processes, providing a historical record of the data and its origins.	10	US DoD ODP Value: at least every 12 months, or when there are significant incidents or significant changes to risks
A.03.15.02.c	System Security Plan	the system security plan is protected from unauthorized disclosure.	Functional	intersects with	Defining Access Authorizations for Sensitive/Regulated Data	DCH-01.4	Mechanisms exist to explicitly define authorizations for specific individuals and/or roles for logical and /or physical access to sensitive/regulated data.	5	
A.03.15.02.c	System Security Plan	the system security plan is protected from unauthorized disclosure.	Functional	intersects with	Disclosure of Information	DCH-03.1	Mechanisms exist to restrict the disclosure of sensitive / regulated data to authorized parties with a need to know.	5	
A.03.15.02.c	System Security Plan	the system security plan is protected from unauthorized disclosure.	Functional	subset of	System Security & Privacy Plan (SSPP)	IAO-03	Mechanisms exist to generate System Security & Privacy Plans (SSPPa), or similar document repositories, to identify and maintain key architectural information on each critical system, application or service, as well as influence inputs, entities, systems, applications and processes, providing a historical record of the data and its original.	10	
03.15.03	Rules of Behavior	Determine If:	Functional	no relationship	N/A	N/A	N/A	N/A	No requirements to map to.
A.03.15.03.ODP[01]	Rules of Behavior	the frequency at which the rules of behavior are reviewed and updated is defined.	Functional	intersects with	Rules of Behavior	HRS-05.1	Mechanisms exist to define acceptable and unacceptable rules of behavior for the use of technologies, including consequences for unacceptable behavior.	5	
A.03.15.03.a	Rules of Behavior	rules that describe responsibilities and expected behavior for system usage and protecting CUI are established.	Functional	intersects with	Rules of Behavior	HRS-05.1	Mechanisms exist to define acceptable and unacceptable rules of behavior for the use of technologies, including consequences for unacceptable behavior.	5	
A.03.15.03.a	Rules of Behavior	rules that describe responsibilities and expected behavior for system usage and protecting CUI are established.	Functional	intersects with	Social Media & Social Networking Restrictions	HRS-05.2	Mechanisms exist to define rules of behavior that contain explicit restrictions on the use of social media and networking sites, posting information on commercial websites and sharing account information.	5	
A.03.15.03.a	Rules of Behavior	rules that describe responsibilities and expected behavior for system usage and protecting CUI are established.	Functional	intersects with	Use of Communications Technology	HRS-05.3	Mechanisms exist to establish usage restrictions and implementation guidance for communications technologies based on the potential to cause damage to systems, if used maliciousty.	5	
A.03.15.03.a	Rules of Behavior	rules that describe responsibilities and expected behavior for system usage and protecting CUI are established.	Functional	intersects with	Use of Mobile Devices	HRS-05.5	Mechanisms exist to manage business risks associated with permitting mobile device access to organizational resources.	5	
A.03.15.03.b	Rules of Behavior	rules are provided to individuals who require access to the system.	Functional	intersects with	Terms of Employment	HRS-05	Mechanisms exist to require all employees and contractors to apply cybersecurity & data privacy principles in their daily work.	5	
A.03.15.03.c	Rules of Behavior	a documented acknowledgement from individuals indicating that they have read, understand, and agree to abide by the rules of behavior is received before authorizing access to CUI and the system.	Functional	intersects with	Policy Familiarization & Acknowledgement	HRS-05.7	Mechanisms exist to ensure personnel receive recurring familiarization with the organization's cybersecurity & data privacy policies and provide acknowledgement.	5	
A.03.15.03.d[01]	Rules of Behavior	the rules of behavior are reviewed < A.03.15.03.ODP[01]: frequency>.	Functional	intersects with	Rules of Behavior	HRS-05.1	Mechanisms exist to define acceptable and unacceptable rules of behavior for the use of technologies, including consequences for unacceptable behavior.	8	US DoD ODP Value: at least every 12 months, or when there are significant incidents or significant changes to risks
A.03.15.03.d[02]	Rules of Behavior	the rules of behavior are updated <a.03.15.03.odp[01]: frequency="">.</a.03.15.03.odp[01]:>	Functional	intersects with	Rules of Behavior	HRS-05.1	Mechanisms exist to define acceptable and unacceptable rules of behavior for the use of technologies, including consequences for unacceptable behavior.	8	US DoD ODP Value: at least every 12 months, or when there are significant incidents or significant changes to risks
03.16.01	Security Engineering Principles	Determine If:	Functional	no relationship	N/A	N/A	N/A	N/A	No requirements to map to.
A.03.16.01.ODP[01]	Security Engineering Principles	systems security engineering principles to be applied to the development or modification of the system and system components are defined.	Functional	subset of	Secure Engineering Principles	SEA-01	Mechanisms exist to facilitate the implementation of industry- recognized cybersecurity & data privacy practices in the specification, design, development, implementation and modification of systems and services.	10	
A.03.16.01.ODP[01]	Security Engineering Principles	systems security engineering principles to be applied to the development or modification of the system and system components are defined.	Functional	subset of	Technology Development & Acquisition	TDA-01	Mechanisms exist to facilitate the implementation of tailored development and acquisition strategies, contract tools and procurement methods to meet unique business needs.	10	
A.03.16.01.ODP[01]	Security Engineering Principles	systems security engineering principles to be applied to the development or modification of the system and system components are defined.	Functional	subset of	Development Methods, Techniques & Processes	TDA-02.3	Mechanisms exist to require software developers to ensure that their software development processes employ industry-recognized secure practices for secure programming, engineering methods, quality control processes and validation techniques to minimize flawed and/or malformed software.	10	
A.03.16.01	Security Engineering Principles	<a.03.16.01.odp[01]: engineering="" principles="" security="" systems=""> are applied to the development or modification of the system and system components.</a.03.16.01.odp[01]:>	Functional	intersects with	Operationalizing Cybersecurity & Data Protection Practices	GOV-15	Mechanisms exist to compel data and/or process owners to operationalize cybersecurity & data privacy practices for each system, application and/or service under their control.	5	US DoD ODP Value: Guidance: At a minimum, documentation that provides user and administrator guidance for the implementation and operation of controls. The level of detail required in such documentation should be based on the degree to which roganizations depend on the capabilities, functions, or mechanisms to meet risk response expectations. Requirements can include mandated configuration settings that specify allowed functions, ports, protocols, and services. Acceptance criteria for systems, system components, and system services are defined in the same manner as the criteria for any organizational acquisition or procurement.

03.16.02	Unsupported System Components	Determine If: system components are replaced when support for the	Functional	no relationship	N/A	N/A	N/A Mechanisms exist to prevent unsupported systems by:	N/A	No requirements to map to.
A.03.16.02.a	Unsupported System Components	components is no longer available from the developer, vendor, or manufacturer.	Functional	intersects with	Unsupported Systems	TDA-17	(1) Replacing systems when support for the components is no longer available from the developer, vendor or manufacturer; and (2) Requiring justification and documented approval for the continued use of unsupported system components required to satisfy mission/business needs.	5	
A.03.16.02.b	Unsupported System Components	options for risk mitigation or alternative sources for continued support for unsupported components that cannot be replaced are provided.	Functional	intersects with	Alternate Sources for Continued Support	TDA-17.1	Mechanisms exist to provide in-house support or contract external providers for support with unsupported system components.	5	
03.16.03	External System Services	Determine If:	Functional	no relationship	N/A	N/A	N/A	N/A	No requirements to map to.
A.03.16.03.ODP[01]	External System Services	security requirements to be satisfied by external system service providers are defined.	Functional	intersects with	Third-Party Contract Requirements	TPM-05	Mechanisms exist to require contractual requirements for cybersecurity & data privacy requirements with third-parties, reflecting the organization's needs to protect its systems, processes and data.	5	
A.03.16.03.ODP[01]	External System Services	security requirements to be satisfied by external system service providers are defined.	Functional	intersects with	Contract Flow-Down Requirements	TPM-05.2	Mechanisms exist to ensure cybersecurity & data privacy requirements are included in contracts that flow-down to	5	
A.03.16.03.a	External System Services		Functional	intersects with	Third-Party Contract Requirements	TPM-05	applicable sub-contractors and suppliers. Mechanisms exist to require contractual requirements for cybersacurity & data privacy requirements with third-parties, reflecting the organization's needs to protect its systems, processes and data.	8	US DOD ODP Values: (1) For cloud service providers: (1) For dRAMP Authorized at the FedRAMP Moderate (or higher) baseline in accordance with the FedRAMP Marketplace; or (ii) meets security requirements established by the government equivalent to the FedRAMP Moderate (or higher) baseline. (2) All other external service providers must meet NIST SP 800-171 R2.
A.03.16.03.b	External System Services	user roles and responsibilities with regard to external system services, including shared responsibilities with external service providers, are defined and documented.	Functional	intersects with	Responsible, Accountable, Supportive, Consulted & Informed (RASCI) Matrix	TPM-05.4	Mechanisms exist to document and maintain a Responsible, Accountable, Supportive, Consulted & Informed (RASCI) matrix, or similar documentation, to delineate assignment for cybersecutivy & data privacy controls between internal stakeholders and External Service Providers (ESPs).	5	
A.03.16.03.c	External System Services	processes, methods, and techniques to monitor security requirement compliance by external service providers on an ongoing basis are implemented.	Functional	intersects with	Third-Party Scope Review	TPM-05.5	Mechanisms exist to perform recurring validation of the Responsible, Accountable, Supportive, Consulted & Informed (RASCI) matrix, or similar documentation, to ensure cybersecurity & data privacy control assignments accurately reflect current business practices, compliance obligations, technologies and stakeholders.	5	
A.03.16.03.c	External System Services	processes, methods, and techniques to monitor security requirement compliance by external service providers on an ongoing basis are implemented.	Functional	intersects with	First-Party Declaration (1PD)	TPM-05.6	Mechanisms exist to obtain a First-Party Declaration (1PD) from applicable External Service Providers (ESPs) that provides assurance of compliance with specified statutory, regulatory and contractual obligations for cybersecurity & data privacy controls, including any flow-down requirements to subcontractory.	5	
A.03.16.03.c	External System Services	processes, methods, and techniques to monitor security requirement compliance by external service providers on an ongoing basis are implemented.	Functional	intersects with	Third-Party Attestation	TPM-05.8	Mechanisms exist to obtain an attestation from an independent Third-Party Assessment Organization (3PAO) that provides assurance of conformity with specified statutory, regulatory and contractual obligations for cybersecurity & data privacy controls, including any flow-down requirements to contractors	5	
A.03.16.03.c	External System Services	processes, methods, and techniques to monitor security requirement compliance by external service providers on an ongoing basis are implemented.	Functional	intersects with	Review of Third-Party Services	TPM-08	and subcontractors. Mechanisms exist to monitor, regularly review and assess External Service Providers (ESPs) for compliance with established contractual requirements for cybersecurity & data privacy controls.	5	
03.17.01	Supply Chain Risk Management Plan	Determine If:	Functional	no relationship	N/A	N/A	N/A	N/A	No requirements to map to.
A.03.17.01.ODP[01]	Supply Chain Risk Management Plan	the frequency at which to review and update the supply chain risk management plan is defined.	Functional	subset of	Supply Chain Risk Management (SCRM) Plan	RSK-09	Mechanisms exist to develop a plan for Supply Chain Risk Management (SCRM) associated with the development, acquisition, maintenance and disposal of systems, system components and services, including documenting selected mitigating actions and monitoring performance against those plans.	10	
A.03.17.01.a[01]	Supply Chain Risk Management Plan	a plan for managing supply chain risks is developed.
